

5023.0809

ShowerLine (for custom-made glass solutions) | Left-aligned | 5023

For left-aligned shower screen.

ShowerLine has a built-in fall, so the floor in the shower cubicle has the correct 2% slope towards the floor drain.

For added wetroom safety, the shower cubicle is framed by flanges on three sides. The solution allows you to have the glass wall prepared by a local supplier, who can tailor the glass wall to any height, a depth of 800-900 mm and glass thickness of 8-10 mm.

Combine with: outlet unit, frame and grating/panel.
